

Hispanic/Latino Clients:

HRSA's Ryan White HIV/AIDS Program, 2022

Population Fact Sheet | April 2024

The Health Resources and Services Administration's Ryan White HIV/AIDS Program (RWHAP) provides a comprehensive system of HIV primary medical care, medications, and essential support services for low-income people with HIV. More than half the people with diagnosed HIV in the United States—nearly 567,000 people in 2022—receive services through RWHAP each year. The RWHAP funds grants to states, cities, counties, and local community-based organizations to provide care and treatment services to people with HIV to improve health outcomes and reduce HIV transmission. For more than three decades, RWHAP has worked to stop HIV stigma and reduce health disparities by caring for the whole person and addressing their social determinants of health.

Of the more than half a million clients served by the Ryan White HIV/AIDS Program (RWHAP), more than 414,000 (74.2 percent) are people from racial and ethnic minority groups; more than 141,000 (25.3 percent) of all RWHAP clients are Hispanic/Latino people.

Learn more about Hispanic/Latino clients served by RWHAP:

- **The majority of Hispanic/Latino clients served by RWHAP are male.** Data show that 76.6 percent of clients are male, 20.0 percent are female, and 3.4 percent are transgender.
- **The majority of Hispanic/Latino clients served by RWHAP are people with lower incomes.** Data show that 61.1 percent of Hispanic/Latino clients are living at or below 100 percent of the federal poverty level, which is higher than the national RWHAP average (58.6 percent).
- **Data show that 6.0 percent of Hispanic/Latino RWHAP clients experience unstable housing.** This percentage is slightly higher than the national RWHAP average (5.2 percent).
- **Hispanic/Latino RWHAP clients are aging.** Among all Hispanic/Latino RWHAP clients, 42.1 percent are aged 50 years and older.
- **Among male Hispanic/Latino RWHAP clients, 69.8 percent are gay, bisexual, or other men who have sex with men.** This percentage is slightly higher than the RWHAP national average (67.9 percent) of all male clients.

Medical care and treatment improve health outcomes and decrease the risk of HIV transmission. People with HIV who take their medication as prescribed and are virally suppressed cannot sexually transmit HIV to their partners and can live longer and healthier lives. According to 2022 data, **91.3 percent of all Hispanic/Latino RWHAP clients receiving HIV medical care are virally suppressed**,* which is higher than the national RWHAP average (89.6 percent).

- 91.3 percent of Hispanic/Latino men receiving RWHAP HIV medical care are virally suppressed.
- 91.6 percent of Hispanic/Latina women receiving RWHAP HIV medical care are virally suppressed.

* Viral suppression is defined as a viral load result of less than 200 copies/mL at the most recent test, among people with HIV who had at least one outpatient ambulatory health services visit and one viral load test during the measurement year.
